

VibroMatrix® Kit

Balancing Kit

The VMSet-01 come in a handy case and provide you with everything you need for Single- resp. Two-Plane-Balancing. It is not necessary to select all required single components on your own.

The system can be extended easily by new software instruments, e.g. for frequency or run-up analysis at any time. New hardware components are not necessary.

	VMSet-01-1	VMSet-01-2
	Single-Plane-Balancing	Single- and Two-Plane-Balancing
Hardware		
Sensor for Vibration Measurement	Piezoelectric accelerometer, shear design - Sensitivity: 100 mV/g, linear frequency range: 0.13 .. 22 000 Hz - Operating temperature: -20 .. 120 °C - Protection grade: IP67 / insulated case avoiding ground loop problems - Accessories: Clamping magnet and cable (5m)	
Amount	1	2
Sensor for Reference Position	opto-electronic sensor - Scanning range: Maximum 7m, signal sequence min: 1500/s, response time: < 330 µs - Protection grade: IP67, operating temperature: -40 .. 60 °C - Accessories: Stand with switchable magnetic base, 5m cable, reflection foil	
Additional accessories	- Angle meter specialized for balancing, precision scale incl. test weight	
USB Box for Digitization	InnoBeamer LX2 - Inputs: 2x analog for vibration sensor(s), 1x digital for photoelectric reflex switch - Signal frequency: 0.1 .. 3200 Hz - Supply current: < 500 mA with supply of all sensors - no mains adapter required - Operating temperature: -20 .. 50 °C, weight: 350 gr. - Accessories: Synchronisation cable and 1m USB cable	
Software Licenses		
InnoBalancer Pro	1x	2x

InnoBalancer® 1.9

Field Balancing

Clearly structured setting options

Purposefully reached balanced status

Analysis and display of optimum rotation speed for balancing

Overview of all measuring runs

Application

The InnoBalancers are designed for the reduction of vibrations.

Rotating parts in drives, gears, pumps, fans and many other technical products cause perturbing vibrations. These vibrations often have to be reduced in order to increase product quality and durability by smooth run.

The InnoBalancers allow a purposeful vibration reduction by balancing. Both discoidal and longish rotors can be balanced systematically and fast.

The InnoBalancers support field balancing. Ideally, the rotor is balanced directly in installed state. So you save the complex dismantling and the transport of the rotor to a balancing machine. Moreover, in many cases, an acceptable performance can only be achieved by balancing the installed rotor with all attached parts.

Properties

The InnoBalancers guide the user through the balancing process so that unbalance and caused vibrations are reduced purposefully.

You enter the most important rotor data in a clearly structured control panel. Afterwards you open the "balancing" control panel. It presents the balancing process with its different steps which you simply carry out. For rotors with alternating rotation speeds, the InnoBalancer Pro offers the analysis of optimum rotation speed for balancing so that you are prevented from balancing at resonant rotation speeds.

By means of the automatic recognition of rotation speed, the InnoBalancer reads the vibration vectors in a high quality and calculates the unbalance. The InnoBalancer Pro also offers suggestions for the test mass.

After unbalance calculation, the InnoBalancer offers clear suggestions for balancing. In case of not following these suggestions, consequences are already shown in chart even before the measurement is started.

Furthermore, the InnoBalancer Pro masters continuous improvement of influence coefficients and shows the single vectors of each revolution as well as the development of the vibration vectors for all measuring runs.

Measuring runs can be saved and reloaded. Thereby balancing can be interrupted and later be continued.

Technical Data

	InnoBalancer Pro	InnoBalancer	InnoBalancer Light
Balancing Methods and Calculations			
Planes	One- and Two-Plane Balancing for static and dynamic unbalance		
Fixed Positions	3..99 fixed positions, adjustable angle difference between 2 planes	-	
Balancing Aims: Reduction of the following measurands to an adjustable tolerance	Unbalance magnitude Unbalanced mass Balance quality acc. to DIN ISO 1940 Vibration displacement Vibration velocity Vibration acceleration	Unbalance magnitude Unbalanced mass	
Test Masses	Suggestion for test mass Before run: Add / Remove Afterwards: Keep / Revert	Before run: Add / Remove Afterwards: Revert	Before run: Add Afterwards: Revert
Balancing Measures	Add mass Remove mass Drill radial Mill Balancing rings, nuts Radial setscrews Mass list	Add mass Remove mass	Add mass
Additional Calculations and Analyses	Optimum rot. speed for balancing Defined unbalance Vector monitoring Adding influence coefficients Combining masses	Vector monitoring (checks whether the vector positions are plausible)	
Signal Processing			
Vibration Measurands	Vibration velocity Vibration acceleration Vibration displacement	Vibration velocity	
Units	m/s, mm/s, µm/s, nm/s, pm/s, in/s, mil/s, µin/s, dB m, mm, µm, nm, pm, ft, in, mil, µin, dB t, kg, g, mg, µg, ng, lb, oz, dram kgm, gm, gmm, mgmm, µgmm, ngmm, g in, lb in, dram in, oz in °, rad kHz, Hz, mHz, 1/s, 1/min, 1/h, rpm, cpm
